

Zollner – **sustainable solutions** for a common future

Sustainability is gaining increased significance and demands that companies adapt their processes to it. With a comprehensive sustainability strategy, we assume responsibility at Zollner, demand this from our partners and support our customers on their way to a sustainable future. We focus on six goals, which we can actively influence as a Group of companies.

Comprehensive Sustainability Strategy

We rely on sustainable development and promote environmental, social responsibility and governance aspects in a targeted manner.

Environmental Sustainability

- Long-term storage
- Redesigns to manage increasing obsolescence
- Repair service and refurbishment
- E-vehicles, Loading stations for electric cars, more than 15 years of experience in the area of industrial engineering and inverter production
- Photovoltaic systems, wood-chip heating systems, sourcing green energy

Social Responsibility

- Promoting charitable engagement
- Benefit campaigns, donations and endowment activities
- Health offers
- Further education

Governance

- Sustainability as a management goal
- Support for sustainable sectors
- Consideration of SDGs in development

Our Commitment – Your Added Value

Future vision and promoting innovation

We invest in sustainable manufacturing technologies in a targeted way to promote environmentally friendly products. We promote green projects with our partners and customers that support ecological progress and make a sustainable future possible.

Sustainability and the Supply Chain

Our raw materials stem from sustainable and ethically acceptable sources – conflict minerals have no place in our plants. We work solely with suppliers who fulfill strict environmental and social standards. Together with our customers, we develop solutions to shape the supply chain to be continuously more sustainable.

Successes and Figures

We have obligated ourselves to achieve clear sustainability goals. We additionally sensitize 100 % of our A-customers routinely and actively on the topic of sustainability.

Customer Collaboration and Influence

As an EMS provider, we do not structure everything ourselves, however, we do use our opportunities to actively influence. We encourage our customers to make sustainable decisions in design and production in that we recommend energy-saving components, long-life materials and environmentally friendly packaging. Through binding sustainability criteria for suppliers and components we ensure adherence to ecological standards. In this way we help our customers to realize their projects in an environmentally conscious way and at the same time provide **solutions for your ideas.**
